Sector: Technology

FY22 profitability in line with estimates

eVISO has delivered FY22 operating figures in line with our estimates, despite the turbulent and volatile environment in the energy market. Net profit has been impacted by a Eu2.9mn tax on extra profits approved by the Italian government. The group has conservatively accounted the effects, but it will appeal against the tax. Taking into account that the price of energy is mainly a pass-through for eVISO, we believe that it has good chances to succeed. Looking forward, the management expects to increase profitability in terms of Eu/MWh and to continue the improvement of the proprietary AI platform. Finally, the reintroduction of system charges at some point in the coming months should bring additional substantial improvements to the NWC. We have increased our top line (incorporating a scenario of higher for longer energy prices) and EBITDA estimates. We confirm our Buy rating with TP of Eu4.5/share.

- Strong top line and NFP already released in August. Profitability in line with estimates. Top line, KPIs and NFP were already reported in August. Sales were 9% above our estimate (19% versus 2HE), reaching Eu209.6mn (+173% yoy). On top of the effect of strong increases in the price of electricity, rising volumes and business developments played a crucial role. Gross margin expanded across every business line, posting a more than 40% yoy growth. EBITDA came in slightly higher than expected, at Eu4.8mn (+46% yoy). EBIT also posted a substantial increase, with adjusted EBIT landing at Eu3.4mn (+63% yoy and in line with our estimates). Net profit was impacted by a Eu2.9mn extraordinary tax ("Extra-profit contribution"), decided by the Italian government to hit extra profits of corporates which are taking advantage on the current scenario of very high electricity prices. The group has conservatively accounted the effects, but it will appeal against the tax. Considering that the price of energy is mainly a pass-through for eVISO, we believe that it has good chances to succeed. By not considering this amount, adj. net profit landed at Eu2.4mn (up 83% yoy), with a margin of 1.2%. Finally, the company reported a net cash of Eu12.3mn (up from Eu5mn in Dec 2021 and above our estimate of Eu6.7mn), thanks to an excellent management of NWC.
- Improvement in marginality, NWC and AI capabilities at the horizon. The management expects a continuation of high and volatile prices of gas and electricity in the following 18-24 months. In this scenario, the spreads (in terms of €/MWh) applied by the players in the market are increasing. eVISO is moving in the same direction. Furthermore, while the elimination of the system charges in 2022 has negatively impacted the NWC of the company, their re-introduction by the Italian government at some point in the next months should bring a substantial improvement to the cash cycle. Finally, the company should continue to constantly invest to improve its proprietary AI platform, which has been stress-tested in a turbulent environment. Since May, eVISO has indeed announced several new enhancements, such as the reduction of anomalies by 30x, the improvement of the platform's forecasting capabilities by 18%, and the release of *Nestore Price* (a platform that gathers and analyses the commercial offers of electricity competitors, used by eVISO's salesforce). More important, the limited increase in G&A costs despite the strong increases in business volumes has highlighted a very strong scalability of the platform.
- Slight upward revision of estimates. We increase both our revenues (incorporating a scenario of higher for longer energy prices) and EBITDA estimates for 2023/2024 by 46%/35% and 5%/5% respectively.
- We confirm our BUY rating with TP of Eu4.5/share. We combine a multiple-based valuation (70% weight) with a DCF based on our long-term framework (30%). Please see our note ("Intelligent commodities reloaded") published in May for more details. We confirm our BUY rating and TP of Eu4.5/share. eVISO has been a strong relative outperformer YTD, but we believe that the long-term potential of the group commands a strong further re-rating.

ALANTRA Italian Equity Research Profile

Background	eVISO has developed a proprietary Artificial Intelligence platform for commodity markets with physical deliver leveraging on the engineering know-how and sector expertise of its founder and management team. eVISO's platform is able to automatically collect, cluster and analyze Big Data and to elaborate forecasts to be applied c both demand and supply sides, optimizing volume and pricing
	eVISO has successfully deployed its AI platform in the Italian electricity trading and sale business. The group buy electricity on the wholesale market and sells it to end-users or resellers, with an innovative business model: a) to-1 approach to clients and preliminary selection of the most profitable end-users; b) Monitoring of clients' mete and grouping in different clusters, to enhance forecasting capabilities and to save penalties paid on the market; Algo trading execution in the complex electricity market. Efficiencies and value creation can be shared with th clients. The group has delivered sales growth, very low churn and gross margin above industry standard
Positioning	eVISO (a digital native player) has developed solutions in the electricity market that incumbents, with legate business models and traditional commercial approaches, have difficulties to replicate
	First mover competitive advantage is an entry barrier for potential newcomers. We do not see examples of B2 players in the Italian electricity market, which leverage on an AI technology. This also makes eVISO a potenti technology partner for resellers and for incumbents. Some ad-hoc services have been launched in 2021
	According to our estimates, the group should remain a niche player in the electricity business, suggesting potenti for M/L term further expansion
Growth	We expect 12% sales CAGR over FY22A-25E period, driven by electricity prices, but with initial contribution fro other commodities
	We expect eVISO to continue to post above sector-average profitability in the energy business: the expansion the direct client base and diversification in new commodities with a platform approach (most of revenues flow t gross margin) should be two profitability tailwinds in the future. By contrast, expansion in the reseller busine (although important to cover fixed costs) should be a headwind. Overall, we expect eVISO to post a 22% gro margin CAGR with yield on revenues increasing from 4.1% in 2022 to 5.4% in 2025
	Although we expect eVISO to invest in its AI platform in the coming years, GM growth should trigger marg expansion. We expect EBITDA to grow from Eu4.8mn in FY22 to Eu9.6mn in FY25, posting a 26% CAGR
Strategy	eVISO is managing expansion into other commodities: gas (where the electricity business model can be replicate and upselling potential exploited), apples and metals. In agri-commodities the business model should be skewe to services / marketplace. While new ventures should represent only 3.7% of sales in FY25E, successful expansio would pave the way for margin improvement, the penetration of other areas and the future exploitation of the huge amount of collected data Over the coming years, new opex / capex will be needed to (i) develop the AI platform; (ii) build a new headquarte Operating cash flow generation and the proceeds from the IPO should support the expected acceleration of the
	growth plan
	Strengths Weaknesses
	or data analysis, forecasting and execution Time required to train a high quality salesforce
ven and protitable	e application in Italian energy markets Intrinsically low margin business

Ρ Limited capital requirements and strong FCF generation

Opportunities Growth of the addressed market and market share in existing businesses Expansion in new segments of existing businesses Expansion in new commodities

Credit risk (commercial receivables versus SMC clients)

Threats

Increasing commercial competition on high-margin clients in electricity Failure to exploit the platform in new commodities Regulatory changes in the Italian energy market
