Total energy supplied up +26% YoY in 3Q supported by both electricity and gas

eVISO published yesterday some financial data for the period 3Q-9M25/26A. Total energy supplied grew +26% YoY, reaching 420GWh in 3Q. This led energy supplied in 9M to 1,084GWh, up +10% YoY. Looking to 3Q, electricity supplied increased +15% YoY (to 325GWh), supported by positive contribution from both the direct channel (+29% YoY, with positive trends in all sub-segments) and the reseller one (+8% YoY, with a clear acceleration from -15% YoY in 1H). On the other hand, eVISO delivered total 94GWh of gas, marking an YoY growth of +89% composed +57% in the direct channel (again with positive performances across all sub-segments) and almost +800% in Resellers. Total apples delivered reduced -13% YoY in 3Q, while the number of ancillary practices was up +15% YoY.

3Q25/26A Gross Margin in the range €6.0-6.4m, up +22%/+31% YoY

The strong increase in energy delivered more than offset the unfavourable trend seen in energy prices, thus leading to an YoY revenues growth of +13% YoY in 3Q to €98m. More interestingly, Gross Margin stood at €6.0-6.4m in the third quarter, implying an YoY increase of +22%/31%. As a reminder, Gross Margin was €10.7m in 1H. Within the press release, eVISO commented that the direct electricity channel represented the main driver for margin growth reflecting quality and stability of customer relationships. eVISO finally unveiled to have closed 3Q with a net cash position of €8.4m, from €9.5m at the end of December. eVISO detailed that working capital absorption during the quarter mainly reflected strong growth in the gas segment, which requires greater advance financing of raw materials.

FY25/26E-27/28E estimates overall unchanged. '25/26E EBITDA seen at €12m

Following the publication of 3Q-9M25/26A main financial figures, we keep our estimates for the period FY25/26E-27/28E broadly unchanged. Our estimates entail a double-digit YoY increase in total energy delivered to over 1.4TWh, to be followed by an average increase of over +20% YoY in the next couple of years. As such, we see Gross Margin growing at +17% CAGR in FY24/25A-27/28E. As for this year, we believe that eVISO may generate an EBITDA/Gross Margin conversion rate of almost 53%, which should increase to 59% in FY27/28E, reflecting the benefit from the adoption of a platform-profit formula. This should result in a 3Y EPS CAGR of c.30%. We finally expect eVISO to close this FY with €11m net cash.

Positive trend in Gross Margin confirms solid opportunities ahead; Outperform

eVISO's 3Q financials highlighted a solid increase in total energy delivered - across all the distribution channels in both electricity and gas - and a sound progression at the Gross Margin level. In our view, this further confirms solid growth opportunities ahead. Worth also to mention that eVISO recently added another growth lever to its business model through the expansion into the Iberian energy market with the establishment of EVISO LUZ Y GAS. In this context, as we believe that current multiples (c.11.5x EV/EBIT and <20x P/E on our FY27/28E numbers) may represent an attractive entry point, we reaffirm our Outperform rating on eVISO, with a new TP of €10.3/share. As a reminder, our TP results from the simple average of DCF and EVA.

Disclaimer

compensation of the analyst who prepared this report is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues, however, compensation may relate to the revenues of Mediobanca S.p.A. as a whole, of which investment banking, sales and trading are a part.

Unless otherwise stated in the text of the research report, target prices are based on either a discounted cash flow valuation and/or comparison of valuation ratios with companies seen by the analyst as comparable or a combination of the two methods. The result of this fundamental valuation is adjusted to reflect the analyst's views on the likely course of investor sentiment. Whichever valuation method is used there is a significant risk that the target price will not be achieved within the expected timeframe. Risk factors include unforeseen changes in competitive pressures or in the level of demand for the company's products. Such demand variations may result from changes in technology, in the overall level of economic activity or, in some cases, from changes in social values. Valuations may also be affected by changes in taxation, in exchange rates and, in certain industries, in regulations. All prices are market close prices unless differently specified.

Since 25 September 2017, Mediobanca uses a relative rating system, based on the following judgements: Outperform, Neutral, Underperform, Not Rated, Coverage suspended and Restricted.

Outperform (O): the stock's total return is expected to exceed the average total return of (i) the analyst's industry (or industry team's) coverage universe or (ii) the entire reference market of the stock, on a risk-adjusted basis, over the next 6-12 months.
Neutral (N): the stock's total return is expected to be in line with the average total return of (i) the analyst's industry (or industry team's) coverage universe or (ii) the entire reference market of the stock, on a risk-adjusted basis, over the next 6-12 months.
Underperform (U): the stock's total return is expected to be below the average total return of (i) the analyst's industry (or industry team's) coverage universe or (ii) the entire reference market of the stock, on a risk-adjusted basis, over the next 6-12 months.
Not Rated (NR): currently the analyst does not have adequate confidence about the stock's total return relative to the average total return of (i) the analyst's industry (or industry team's) coverage or (ii) the entire reference market of the stock, on a risk-adjusted basis, over the next 6-12 months.
Restricted (R): any kind of recommendation on the stock is restricted pursuant to internal compliance policies of Mediobanca since the bank is performing an Investment Banking role in Capital Markets or M&A transactions involving the issuer.
Coverage suspended (CS): the coverage is temporarily suspended due to endogenous events related to Mediobanca Research (reallocation of coverage within the team, analyst resignation, etc).

The recommendation relies upon the expected relative performance of the stock considered versus its benchmark. Such an expected relative performance relies upon a valuation process that is based on the analysis of the company's business model / competitive positioning / financial forecasts. The company's valuation could change in the future as a consequence of a modification of the mentioned items.

Please consider that the above rating system also drives the portfolio selections of the Mediobanca's analysts as follows: long positions can only apply to stocks rated Outperform and Neutral; short positions can only apply to stocks rated Underperform and Neutral; portfolios selection cannot refer to Not Rated stocks; Mediobanca portfolios might follow different time horizons.
